

WAREHOUSE MANAGEMENT SYSTEM CAPABILITIES

Our WMS offers multiple real-time notification options to inform you about the arrival of cargo and provide inventory reports, which contribute to your supply chain management efforts.

Upon the cargo's arrival at our warehouse, we generate a pre-notice of arrival. The Warehouse Team then scans the barcode on the Trailer Entrance Authorization Form and prints license plates (labels) containing barcodes for each pallet.

Date/Time: 7/19/2021 4:01 PM
 Please verify, a overage of 2 packages was detected.

****A TOTAL 2 DAMAGES WHERE RECEIVED ON BL***

Once the receiving process verifies the quantity and ensures that everything is in order, our warehouse team will proceed to issue a warehouse location of each pallet on our WMS.

Our system offers various configuration options to accommodate your specific cargo receiving requirements. Whether it involves a crossdock movement, pick and pack operations, or the need for detailed inventory with references assigned to each pallet, we can support and customize the configuration according to your specific needs. Here is an example:

Once the Pick Order is prepared and the cargo is in the staging area, we initiate the cargo release process. This involves using our internal Cargo Release document and verifying each pallet by scanning its respective license plate. If the warehouse personnel attempts to ship a different quantity or pallet than what is expected to ship out, the system will immediately halt the process, preventing the cargo from being released. In such cases, only the supervisor will have the authority to re-enable the pick process and proceed accordingly.

The Warehouse Team proceeds to sign the necessary documents and ship the cargo. Additionally, our WMS facilitates efficient operations by providing an inventory report on a daily basis. This report includes comprehensive information, such as the number of days each pallet has been in our warehouse, ensuring transparency and effective management of your inventory.
